MODEL No: MM20.V2

Thank you for purchasing a Sealey product. Manufactured to a high standard this product will, if used according to these instructions and properly maintained, give you years of trouble free performance.

1. SAFETY INSTRUCTIONS

1.1 PERSONAL PRECAUTIONS
✓ When using this multimeter, please observe all normal safety rules concerning:
Protection against the dangers of electrical current.
Protection of the multimeter against misuse.
✓ Full compliance with safety standards can only be guaranteed if used with the test leads supplied. If necessary, they must be replaced with genuine Sealey leads with the same electronic ratings. Failure to do so will invalidate the warranty.
✓ DO NOT use leads if damaged or if the wire is bared in any way.

1.2 GENERAL SAFETY INSTRUCTIONS
✓ Familiarise yourself with the application and limitations of the multimeter as well as the potential hazards. IF IN ANY DOUBT CONSULT A QUALIFIED ELECTRICIAN.
✓ When the meter is connected to a circuit, do not touch unused meter terminals.
✓ When the magnitude of the value to be measured is unknown beforehand, set the range selector to the highest value.
✓ Before rotating the range selector to change functions, disconnect test leads from the circuit under test.
✓ WARNING! Never perform resistance measurements on live circuits.
✓ Always be careful when working with voltages above 60Vdc or 30Vac rms. Keep your fingers behind the probe barriers while measuring.
✓ Before attempting to insert transistors for testing, ensure that test leads have been disconnected.
✓ Components should not be connected to the transistor socket, capacitor socket or temperature socket when taking voltage measurements with the test leads.
✓ When not in use, store the multimeter carefully in a safe, dry, childproof location. Storage temperature range -10°C to 50°C.

3. OPERATION

✓ WARNING! Ensure that you read, understand and apply the safety and operational instructions before connecting the multimeter. Only when you are sure that you understand the procedures is it safe to proceed with testing.

Operating temperature range 0°C to 40°C.
Remember to turn on multimeter before use and to turn it off when measurement is completed.

NOTE: WHEN THE FIGURE ‘1’ IS DISPLAYED, IT INDICATES AN OVER-RANGE SITUATION AND A HIGHER RANGE NEEDS TO BE SELECTED.

3.1 MEASURING VOLTAGE
3.1.1 Connect the black test lead to the COM input socket and the red test lead to the V1mA*ChFE input socket.
3.1.2 Set the rotary switch to the required V = (dc) or V ~ (ac) range and connect test leads across the source or load under measurement. The polarity of the red test lead connection will be indicated when measuring dc voltages.

3.2 MEASURING CURRENT
3.2.1 Connect the black test lead to the COM input socket and the red test lead to the V1mA*ChFE input socket for measuring a maximum of 200mA.
For a maximum of 10A connect the red lead to the 10A socket.
3.2.2 Set the rotary switch to the required A = (dc) or A ~ (ac) range and connect test leads in series with the load under measurement. The polarity of the red lead connection will be indicated when measuring dc.

3.3 MEASURING RESISTANCE
3.3.1 Connect the black lead to the COM input socket and the red test lead to the the V1mA*ChFE input socket (the polarity of the red lead is ‘+’).
3.3.2 Set the rotary switch to the required Ω range and connect the test leads across the resistance under measurement.
3.3.3 When checking in-circuit resistance, ensure that the circuit under test has all power removed and all capacitors have been fully discharged.
3.3.4 When measuring resistance over 1MΩ, the meter may take a few seconds to get a stable reading. This is normal for high resistance measurements.

3.5 DIODE TESTING
3.5.1 Connect the black lead to the COM input socket and the red lead to to the V1mA*ChFE input socket (the polarity of the red lead is ‘+’).
3.5.2 Set the rotary switch to the ‘◆’ position and connect the red lead to the anode and the black lead to the cathode of the diode under test. The meter will show the approximate forward voltage of the diode. If the leads are reverse connected, only ‘1’ is displayed.
3.6 TRANSISTOR TESTING

3.6.1 Set the rotary switch to the HFE position.

3.6.2 Determine whether the transistor to be tested in NPN or PNP type and locate the Emitter, Base and Collector leads. Insert leads of the transistor into the correct holes in the external transistor testing socket. Connect the black lead to the COM connector and the red lead to the V3mA*CHFЕ input socket.

3.6.3 The meter will show the approximate HFE value at test conditions of base current 10µA and Vce 2.8V.

3.7 CONTINUITY TEST

3.7.1 Connect the black lead to the COM input socket and the red lead to the V3mA*CHFЕ input socket (the polarity of the red lead is ‘+’).

3.7.2 Set the rotary switch to the Ω position and connect the test leads across the two points of the circuit under test. If continuity exists (i.e. resistance less than 100Ω) the built-in buzzer will sound.

WARNING! To avoid electric shock, ensure that the thermocouple has been removed before changing to another function measurement.

3.8 MEASURING TEMPERATURE

3.8.1 Set the rotary switch to the °C position and the LCD display will show the ambient temperature.

3.8.2 Insert the red lead of the K-type thermocouple plug into the V3mA*CHFЕ input socket on the front panel and the black lead into the COM. Now touch the object to be measured with the thermocouple probe.

WARNING! Before attempting to open the case, ensure that test leads have been disconnected from measurement circuits to avoid electric shock hazard.

5.1 To change a fuse. The fuses are located on the back of the circuit board. To gain access to the fuse, remove the protective rubber boot and the two screws from the rear of the meter. Lift off the rear cover, replace the fuse and re-assemble in reverse order.

WARNING! ALWAYS replace a fuse with one of the correct rating.

Fuse 1: 500mA/250V
Fuse 2: 10A/250V

5.2 If the battery sign appears on the LCD display, it indicates that the battery should be replaced. Repeat the steps detailed in section 5.1 to remove the rear cover, replace the battery (9V PP3) and re-assemble in reverse order.
